

## **DEVELOPMENT SUPPORT**

## Who we are ?

**Yupiik** is a service company with a solid experience in digital and information technologies, heavily involved in the **Apache Software Foundation**.

Our consultants have seen just about every type of implementation and bring our strong breadth of experience to help enable your particular situation. You are not just getting a knowledgeable consultant but a developer or contributor to the Apache product that you are using.

Therefore we not only know how to use the products in the real world, but we have deep knowledge of the platform, because we helped write it!

## Why a development support?

At Yupiik, we believe in enabling our customers to be self sufficient with open source technologies. Our consultants and training initiatives want to help build your own internal knowledge base and empower your company to use the open source products and become your own experts.

## Development support offerings

The following is a list of our development support offerings:

**#Stack Tuning:** analyze and review, recommend custom configurations for deployments and specific implementations to enhance performance.

**#Architectural Review:** work with your team in your current software architecture and recommend changes and/or validate direction.

**#Mentoring:** short "code-along" workshops where we develop code with your team and show them best-practice tips and how-tos on working with the Apache services stack.

**#Boot Strap:** aid in getting your project off the ground by setting up your development environment and getting your team ready to produce code.

**#Life Cycle:** act as a part of your team for the full project life-cycle process. We can aid in leading your team through the entire delivery (Integration tests, devops, ...).

## Development support scope

This support is for answering development and architectural questions and not patch/bug or production-down issues.

Support is limited to one development team.

It covers:

- Apache Karaf and subprojects
- Apache ActiveMQ
- Apache Tomcat.
- Apache CXF
- Apache Camel
- Apache Kafka

Our support doesn't stop at Apache projects. We can help guide you to where you organization can leverage open source and be cost effective to fix your bottom line:

- Elastic Search
- Angular
- and many more

## Pricing

Developer support is 12 000 € / year, has an annual fee and includes 10 days of our consultants time per year.

With development support, you get a 10% discount on our training program.

If your organization needs more than 10 days per year, we do offer Enterprise pricing options.
